
**SINCE 1966, AN EMOTIVE JOURNEY
FROM SPAIN TO THE REST OF THE WORLD**

COMPANY PROFILE

SPECIALISTS IN ANTI-AGE COSMETICS

The skin and its purpose within the concept of contemporary beauty, are the continual challenge facing **SKEYNDOR** to make people feel a little happier with their face, their body and moods.

SKEYNDOR is a **professional cosmetics** brand that is celebrating 46 years with the same passion that led to its creation in Terrassa in 1966: to offer the best quality, through pioneering scientific research and effective active ingredients.

SKEYNDOR is a Spanish trademark that is well known throughout the world, and through its experience it has become a **specialist in anti-age treatments**. Its philosophy is to obtain optimum results through manual application or in combination with the apparatus developed by the brand name itself.

Through its **more than 20 product lines** focused on every kind of professional aesthetics treatment, **SKEYNDOR** is one of the pioneering R+D+I firms in the current market.

Thanks to the commitment of its staff of more than 90 people, on a day-to-day basis, the **SKEYNDOR** beauty programs can be used as a working method by the more than 15,000 aesthetics professionals who apply these programs all over the world, from Canada to New Zealand.

SKEYNDOR, MORE THAN 45 YEARS AS A PROFESSIONAL COSMETIC REFERENCE

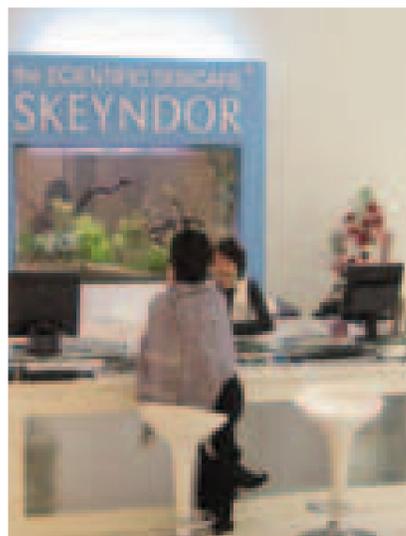

SKEYNDOR was created in the 60s, when **Publio Puente**, Doctor in Chemical Sciences and **Juan Morcillo**, Industrial Engineer, both lecturers at the High School of Industrial Engineering in Terrassa, founded a hair removal wax business in their home town. Immediately the first network of beauty therapists is established as the main clients of the new company. Morcillo, born in Paris, knew the importance of the cosmetic industry and brought the firm a **business and managerial vision**, while Puente was in charge of the **research laboratory** and product development.

In the 70s, **SKEYNDOR** extended its services all over Spain, with a wide range of products and introduced new more attractive and practical professional packaging. The culmination of the firm's national expansion stage was the opening of a branch office in Madrid in 1980. This expansion was completed with the opening of Training Centres for professionals in Barcelona and Madrid, in the middle of the 90s.

During the years 1987 and 1988 **SKEYNDOR** launched the **liposomes** on the professional market; these were the first formula of **encapsulating active ingredients** that **minimised the risk of allergies or irritations**, as it only releases the active ingredient when it is inside the dermis. It soon became a success and today this technology has evolved into **nanotechnology**, one of the scientific basis of current **SKEYNDOR** research.

TRAINING CENTRE IN BARCELONA

At the end of the 80s, the firm began its international expansion. **Portugal** was the first foreign country where **SKEYNDOR** marketed its products in 1989. From then, the firm strengthened its exporting capacity and in 1992 **Italy** joined its international network. During the first few years **SKEYNDOR** entered foreign markets by attending international cosmetics trade fairs.

In 1996 the **SKEYNDOR** Export Department was created. At this time the firm began its relationship with **Asia**, and successfully laid the foundations for the future in these emerging markets, where the skin care culture is deeply rooted. At present, Asia is still one of **SKEYNDOR's** main markets, covering 11 countries and with a 2 million Euro turnover. In Asia the **SKEYNDOR** products are known as **top professional cosmetics**.

For **SKEYNDOR**, 2002 was the year it consolidated its international expansion. The agreement with the Japanese multinational **Kanebo** to research, develop and produce the **Body Slindy** body range, led to a joint venture that lasted until 2006. This agreement promoted the brand image abroad, and it was awarded the **Prize of Excellence in Exportation**, given by the Chamber of Commerce.

In 2004 **SKEYNDOR** created the **Hydra Filler** range, and became a pioneer in developing volumising **micro-capsules** for filling-in wrinkles. In the same year, the prestigious Herald Tribune in Sydney awarded a prize to the **Sublime Eye Contour** product, in the **Platinum** range.

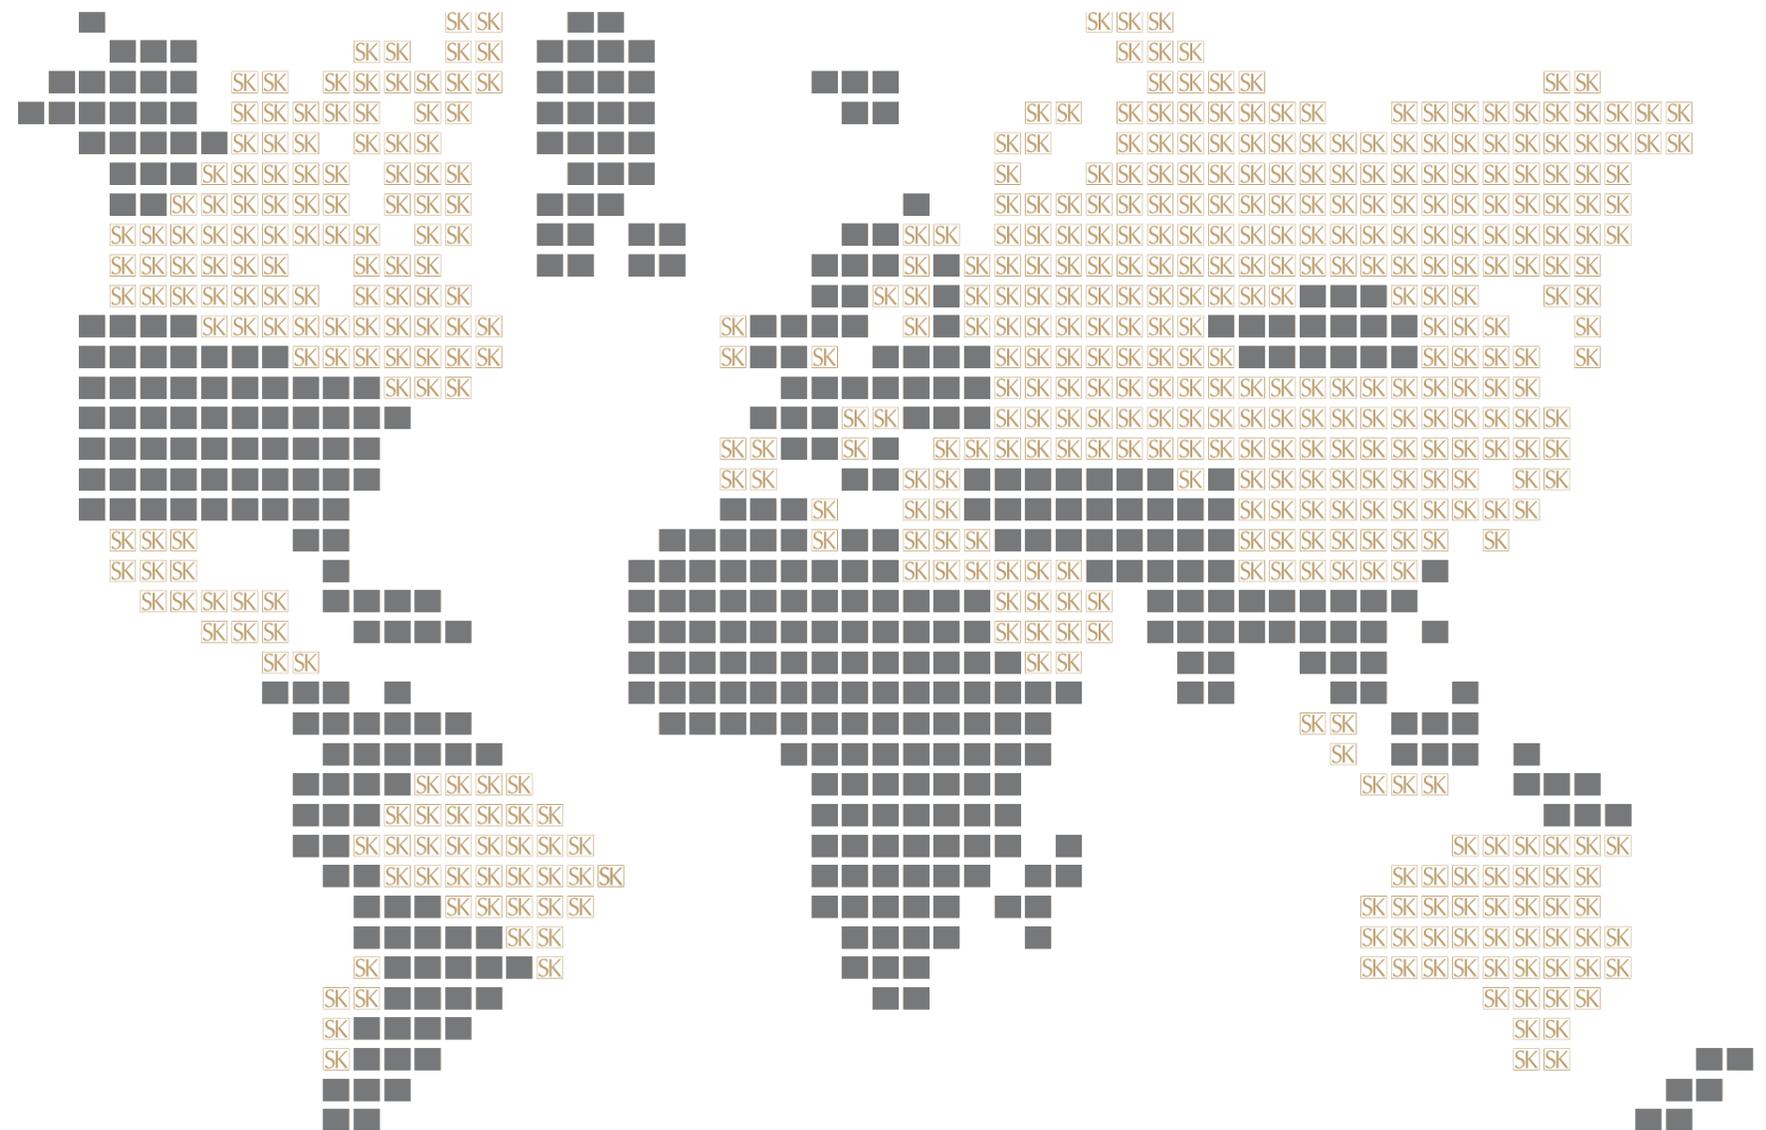

Two years later, in 2006 **SKEYNDOR** launched **Aquatherm**, the fruit of its exclusive agreement with the **Termas de Salies-de-Béarn** (French Pyrenees) to develop the first cosmetic range containing the **thermal water with the richest magnesium** content in the world.

2007 was the year that the **Vitamin C** based treatment was launched, for the first time free of parabens and including NIKKOL-VITC, a **new generation of high cell absorption vitamin C**, up to 7 times more effective than pure vitamin C.

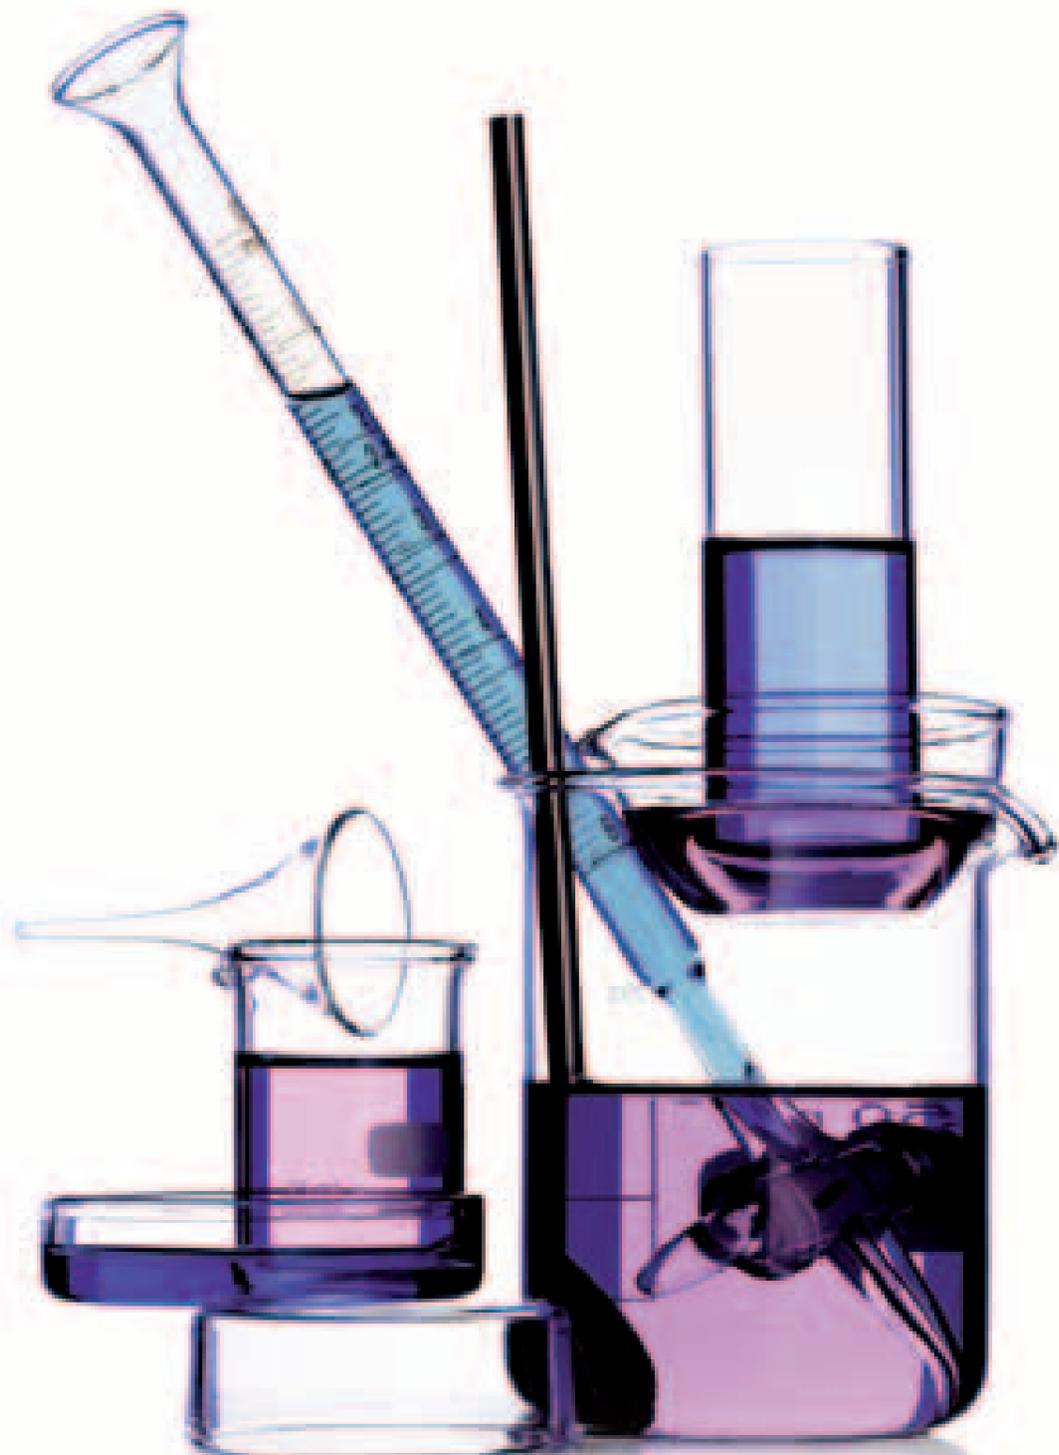

In 2008 the firm started its **genetic cosmetics** era with **Eternal**, a range containing **plant origin stem cell nano-liposomes** as the active ingredient, developed by **SKEYNDOR's** in-house R+D department. That same year, this product was awarded the **European Academy of Cosmetics prize for the most innovative active ingredient**.

The year 2010 saw the arrival of the revolutionary **Corrective** range. After two years research and more than 25 tested active ingredients, **SKEYNDOR** launched this new anti-age treatment as a real alternative to surgery, as its active ingredients **soften expression lines** and **fill in wrinkles**, producing a visible effect after just a few minutes.

From 2006 to 2011 **SKEYNDOR** consolidated its international position to the extent of reaching an **export turnover figure over 35% of its overall sales**. At present, the brand sells in more than **40 countries**, through a network of **35 international distributors**, and it is translated into **15 languages**. Its products are present in **15,000 beauty centres** throughout the world, and 4,800 of these are in Spain. Its product range has succeeded in adapting to **different climates** and in responding to the skin types of different racial backgrounds.

SKEYNDOR WORLD

RESEARCH, DEVELOPMENT OR EXPORTING, THE FUTURE CHALLENGES

At present, company management is in the hands of the founding partners: the **Morcillo – Mur** family, and the **Puente – Garrido** family. In addition to the family members, the various professionals have joined the **Board of Administration**.

In 2010, the company aimed to **increase exports** by 15% and its plans included opening a **new office in Hong Kong**, a leading beauty salon that will operate as an exclusive training centre, like the ones that already exist in Madrid and Barcelona.

SKEYNDOR has its central office in **Terrassa** (Barcelona), from where it manages the company's commercial and financial activity. Its **production and logistics** areas cover **6,700 m²**.

SKEYNDOR has a staff of 90 people, including its own team of qualified technicians and an R+D+I department, into which the company channels 4.5% of its annual turnover. From here, constant studies are conducted in co-operation with more than 50 international IT (Innovation and Technology) companies, and agreements are made with 3 cosmetic efficiency and tolerance testing centres: Evic Internacional, Biolab and Micro-Bios. Since 2000, **SKEYNDOR** has been working with various departments of the High Council of Scientific Research (CSIC) for applying new active ingredients under the concept of "**Scientific Skincare**".

The three pillars of the **SKEYNDOR** philosophy are:

1. Excellence: More than 45 years overcoming expectations and creating confidence. The number of incidence to date is less than 0.008%.

2. Innovation: Always pioneering the development of new technologies and aesthetical solutions.

3. Dynamism: Providing a constant response to the needs of the professional market, based on using state-of-the-art active ingredients, and also application techniques (encapsulation).

These three points form one common objective: the evident desire to define the beauty therapist as the best beauty consultant, while also providing the means and products to guarantee success.

The **SKEYNDOR** product range is made up of:

Facial products:

- Normalization (Essential, Clear Balance and Aquatherm).
- Prevention (Lift Vitamin C, Q-10 Anti-oxidant, Oxygen and Algymask).
- Repair (Radiance Renewing, Derma Peel and Urban White).
- Anti-age (Corrective, Eternal, Platinum, and Natural Defence).
- Men (Skeyndor men)

Aesthetic mesotherapy (synergy between apparatus and cosmetics)

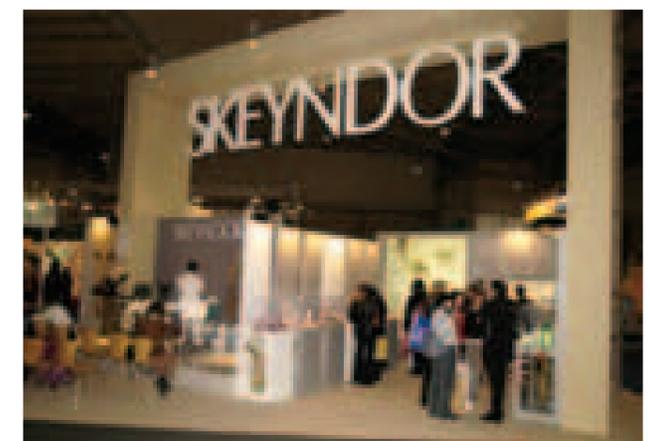

Body products (Body Sculpt, Body Slindy and Spa Senses).

Sun range (Biological Sun Protection).

Make-up (Make-Up Treatment).

Wax line.

Supplements.

FROM THE OUTSET, SKEYNDOR HAS ALWAYS HOSTED A STAND AT THE LEADING NATIONAL AND INTERNATIONAL TRADE FAIRS

SKIN: learn about it

Classifying the skin by its appearance and cutaneous morphology is essential to **selecting the most suitable cosmetic treatment** in each case. **SKEYNDOR** offers cosmetic professionals various ranges that respond to **four basic objectives**:

1. NORMALIZATION

ESSENTIAL LINE

Basic range that provides cleaning, hydration and toning. It takes care of skins which, normally, have small abnormalities which must be treated as soon as they appear.

Active ingredients: **Chamomile**, for cleansing and softening; **cucumber** for purifying; **witch hazel extract** for toning; **plant starch and joba** for renovating; **wheat germ and royal jelly** for nourishing; **silk proteins** for regenerating; **irradiated clay** for hydrating; **marine collagen and marine elastin** for strengthening.

AQUATHERM

A solution for sensitive skins, aimed at standardising and rebalancing epidermal metabolism, re-establishing the function that protects against harmful environmental effects and prevent redness, oedemas or scaling.

Active ingredients: **Thermal water from Salies-de-Béarn**, with more than 25 trace elements in the form of ions (sodium, potassium, calcium, magnesium, magnesiumnc, copper, and others), promotes the quick standardisation of the skin's barrier function and reduces skin reactions; **pre-biotic oligosaccharides**, natural substances from sugars, which protect against the invasion of harmful micro-organisms stimulate the cutaneous flora and rebalance the pH; **ceramides**, they correctly orientate the skin's natural lipid protection layers; **pumpkin extract and soya proteins**, against free-radicals.

CLEAR BALANCE

CLEAR BALANCE is a professional line of products developed specifically to normalise the three main **causes of skin impurities: hyperseborrhea, hyperkeratosis and proneness to infection.**

CLEAR BALANCE includes two different product ranges for use at home and in beauty institutions, for correctly treating these two basic types of acne lesions: normalising treatment product, which **prevent the proliferation of elemental acne lesions (non-inflammatory)**, and fast-acting products for occasional use to **accelerate the evolution of inflammatory lesions.**

The **CLEAR BALANCE** products have been developed with **non-comedogenic excipients** which are **free from oils and fats** and adapt to the specific needs of this type of skin, without causing oiliness or shininess.

Active ingredients: Sebo-regulators: Substances which reduce the production of sebum, usually by blocking the activity of the 5-B-reductase enzyme or by competitive inhibition of the dihydro-testosterone.

Astragalus: Extract of Astragalus membranaceous root, a plant with documented antiinflammatory, anti-bacterial and regenerative properties.

Kerato-regulators: Substances which normalise disorders in the skin's keratinisation process, such as hyperkeratosis (thickening) or parakeratosis (open pores).

Bakuchiol: A photostable compound used as a substitute for retinol with an effect (genetic expression profile) that is practically identical, but with no irritating or sensitising potential.

Ursolic Acid: An alternative compounds to retinoic acid in anti-age treatments. Soothes and repairs the skin, with a very complete regenerative effect, and without leaving scars.

Immuno-stimulators: Substances created to increase the levels of Antimicrobial Peptides that are naturally present in the skin. These peptides act as antibiotics and protect against external microbial invasion, reducing the risk of suffering infections and acne.

Acetyl Dipeptide-3 Amino hexanoate: A synthesised peptide created as a vaccine for specifically increasing the levels of B-defensins, hBD-2 and hBD-3, the most active Antimicrobial peptides which combat the bacteria responsible for acne.

Mead owsweet, phenolic extract: An extract which stimulates the innate immunity of the skin and controls infectious skin flora. Increases the synthesis of cathelicidins, belonging to the antimicrobial peptides family, complementing the antimicrobial effect of B-defensins.

2. REPAIR

DERMA PEEL

Derma Peel is a cosmetic treatment for beauty institutes which require an exfoliation treatment that is comparable to those offered by medical-aesthetic clinics. Its components are formulated at the maximum concentration authorised by the Spanish Medicines Agency (AGEMED).

Derma Peel is a professional tool designed to renovate the appearance of the face, **achieving softer, more even skin**. Its efficacy is based on the combination of five exfoliation techniques in one session; **physical abrasion, ultrasound-based micro derma abrasion (optional), chemical acid exfoliation, enzymatic digestion and biological exfoliation**.

Derma Peel is indicated for treating skin spots, fine expression lines, small scars and acne marks, giving a more even, radiant appearance to the skin, which is noticeable from the first few treatment sessions.

Derma Peel includes a Professional Treatment pack that can be complemented during the same session with two Kits (**Urban White Advanced Kit or Derma Peel Advanced Kit**) to enhance the exfoliation or de-pigmentation results, depending on each need.

Clear Balance treatment range:

1. Diamond skin exfoliating gel

Active ingredients: diamond microparticles. a microdermal abrasive gel designed to eliminate the outermost corneal layer of the skin and unblock the pores, which cleanses, smoothens and prepares the skin for treatment with exfoliation agents with greater penetration properties. specially formulated for conducting ultrasound.

2. Comfort re-balancing facial spray

Active ingredients: Butylcyclohexanol (a specific TRVP neuro-receptor antagonist). A solution with a de-sensitising cosmetic agent for improving skin tolerance. It significantly reduces the tingling, itching sensation produced by exfoliation treatments.

3. Skin exfoliating – phase I

Active ingredients: citric/glycolic acid (8:32, p/p) ph 3,5 a concentrated aha solution that activates the natural degradation of the unions binding the corneocytesdesmosomes, speeding up the renovation of the outer skin layer.

4. Enzymatic factor – phase II

Active ingredients: protease + lisozyme an enzyme solution that specifically degrades the main components of the corneocytes (keratin), reducing the thickness of the skin's outermost layer.

5. Neutralising fresh mask

Active ingredients: Alkaline pH (8), hydrolysed plant keratin. A neutralising mask that re-balances the skin pH after treatment with AHA and suppresses the activity of enzymatic agents. Its refreshing texture provides instant relief for the skin.

DERMA PEEL ADVANCED KIT

1. Peel targeted factor

Active ingredients: Desmoglein-like tripeptide and ursolic acid encapsulated in liposomes. Formula designed to specifically reduce desmosomal cell adhesion in the internal layers of the epidermis, stimulating cell renovation at a profound level.

2. New skin day cream

Active ingredients: Bakuchiol (an alternative to retinol), sun-flower oil unsaponifiable material. A protective cream that maintains the skin barrier function with a retinol-like effect that accelerates the skin's natural renovation. With SPF20 protection.

URBAN WHITE

The first genetic depigmenting treatment.

Urban White forms part of a new generation of skin-whitening treatments known as biological de-pigmenting agents, which act directly on the core of the pigment-producing cells.

These innovative agents are able to re-programme the behaviour of the pigment-producing cells, reducing both their baseline and induced activity.

Their main advantage with respect to non-biological de-pigmentation agents is that they act simultaneously on skin spots caused by the sun and age (induced pigmentation), and gradually lighten the skin's natural tone (genetic or constitutive pigmentation).

Home products:

New skin foaming cleanser. active ingredients: Lactic acid/arginine (20:1) A cleansing mousse with lactic acid combined with arginine. A patented system for releasing AHAs that gives sustained renovation, without irritation. When used every day, deeply cleanses skin impurities and stimulates new epidermis synthesis. For all skin types.

Anti-pollution shield mist. Active ingredients: Urban pollution protector, stabilised vitamin C, spa water. A refreshing spa water mist from southern France which restores the skin's balance and natural wellbeing. Enriched with an exopolysaccharide from the French Polynesian islands, it is capable of reducing the aesthetic effects of urban pollution (fumes, hydrocarbons, tobacco, sun) that lead to premature darkening of the skin.

Shield day cream. Active ingredients: Phenylethyl resorcinol and phenol derivatives, urban pollution protector. A de-pigmentation cream that lightens skin spots and unifies the skin tone. It con-

tains a singular exopolysaccharide that protects the skin from the main urban pollutants that darken the skin. Indicated for persons who live or work in environments with high pollution (fumes, hydrocarbons, tobacco, sun). With SPF20 protection.

Overnight serum. Active ingredients: Lactic acid/arginine (20:1) TGF-β biomimetic peptide encapsulated in liposomes, aminoethylphosphonic acid.

A de-pigmentation serum designed to improve the appearance of skin spots or acne marks. Its concentrated formula helps renovate the epidermis, unifying the skin tone and softening tiny skin flaws. For all skin types and particularly, mixed or oily skins.

Spots eraser cream. Active ingredients: Phenylethyl resorcinol and phenol derivatives, aminoethylphosphonic acid, TGF-β biomimetic peptide encapsulated in liposomes. With a specific formula containing wide-spectrum de-pigmentation agents created to quickly lighten the tone of all types of skin spots or pigmentation. Apply only to pigmented areas.

Shield hand cream. Active ingredients: Phenylethyl resorcinol (alternative to Kojic acid), dictyopteris, urban pollution protector. A treatment formula for hands with aged skin and skin spots. Contains three active ingredients which unify the skin tone, re-densify its appearance and counteract the aesthetic damage caused by the sun and tobacco (tar, toxic agents..). With SPF15 protection.

Matt compact powder spf50. Active ingredients: Pigments that lighten the skin tone. A compact makeup in the form of a cream with the powder finish that instantly lightens and unifies the skin tone, and protects it from the sun (SPF50). Indicated for very fair skins.

3. ANTI-AGE

CORRECTIVE

The alternative to surgery

A cosmetic treatment that **removes the deepest wrinkles**, rejuvenates the expression and restores the skin's firmness and youthful appearance. A real and effective **alternative to surgical treatments**.

Inspired in the world's more prestigious **medical-aesthetical treatments**, the new **Corrective** range **slows down muscular contractions, increases the skin's volume** and **fills in the voids formed by deep wrinkles**. Also, it improves cell architecture and communication, by stimulating the tissue regeneration processes that rejuvenate the skin and standardise its appearance.

Its composition can overcome the skin's natural barrier and its active ingredients combine fill-in techniques with substances that relax the skin's micro muscle contractions and produce an effective and immediate smoothing effect.

Corrective combines **9 active ingredients** including **internal tissue redensifiers, skin fill-in substances, neuro-inhibiting agents** and **skin-lifting peptides**.

Corrective treatment range for home use:

Instant wrinkle filler cream: Cream for filling in deep wrinkles and smoothing expression lines. It is made with internal tissue redensifiers and skin fill-in substances. Reinforced with skin-lifting agents.

Eye expression lines eraser: Specific product for reducing expression lines around the eye contour. A combination of skin-lifting agents and fill-in substances, that produces an immediate lift effect. Its formula is rich in pearl micropigments intensifies the light and immediately softens expression lines.

Expression lines serum: Serum for smoothing deep facial wrinkles and expression lines. Made with neuro-inhibiting agents and skin-lifting peptides with pre- and post-synaptic activity. Reinforced with skin fill-in substances.

Instant lip contour filler: Specific product for filling-in and reducing deep wrinkles around the lip contour. Made with internal tissue redensifiers, skin-lifting agents and skin fill-in substances. Its creamy texture nourishes and hydrates the delicate skin around the lips, providing the protection and volume it needs.

ETERNAL

Plant origin stem cells, encapsulated in nano-liposomes

SKEYNDOR revolutionised the professional cosmetic sector with **Eternal**, the first treatment that uses **plant origin stem cells** for a long-lasting anti-age treatment.

The hundreds and thousands of cells making up the epidermis evolve from a few hundred supercells which produce them on a daily basis. They are the skin's **adult stem cells**. Without them, the skin loses its ability to regenerate itself. The stem cells have a special metabolism, and their care requires essential nutrients. Genetic engineering studies show that part of these nutrients are found inside other supercells with similar characteristics, such as **plant origin stem cells**.

These plant micro particles promote the production of epidermis stem cells and **stimulate the synthesis of the vital substance** forming the skin, helping it recover its volume lost through age. This powerful biological element protects these regenerative cells from the environmental stress caused by UV rays, maintaining their growth and increasing their longevity.

Eternal treatment range:

Eternal cream: Cream containing plant origin stem cell nanoliposomes. Formulated to compensate the loss of the vital substrate and restore the skin's volume lost with age, at the deepest levels. The skin becomes fuller, more even and clearly defined. It combines with Eternal intensive serum to improve results, particularly in very flaccid, lifeless skins.

Eternal intensive serum: Extra concentrated serum of plant origin stem cell nanoliposomes. Powerful life giving and renewing elixir for the skin, that nourishes and revitalises epidermal stem cells. It improves the speed at which cells are renewed, and therefore increases the vital skin component substance. As a result, the skin recovers its lost volume. The face is more youthful, firmer and radiant.

Eternal icy eye cream: Cream for the eye contour area with plant origin stem cell nanoliposomes. It is effective on epidermal stem cells, making them produce a greater amount of the vital dermal substance. Reinforced with pure water liposomes, from Swiss glaciers.

Repair body serum: Body Serum with plant origin stem cell nanoliposomes. It is formulated to renew and rejuvenate the skin in the areas that are weakened most by age and exposure to the sun, such as cleavage, arms and shoulders. Its delicate and soft texture provides moisture and nutrients, making it a perfect anti-age treatment for the body.

ETERNAL. ACTIVE INGREDIENTS: PLANT ORIGIN STEM CELL NANO-LIPOSOMES, OIL-SOLUBLE JAMBU EXTRACT, MARINE LAVANDER AND LUPIN EXTRACT.

PLATINUM

Intensive overall anti-ageing treatment and lifting effect that provides sources of energy and revitalises skin tissues through suitable nutrition and good communication between the cells and their environment.

Active ingredients: **Orchid phytoactive ingredients**, they improve the life expectancy of cells and make them more resistant; **soya and apply phytosterol** stimulate cell metabolism and protein synthesis, they re-establish skin hydration and have repairing effects; **rice and wheat proteins**, with a rich content of amino acids that hydrate and condition the skin, producing a lifting effect; **fresh kiwi and mango** cells, rich in vitamin A and C, pectins, amino acids and sugars, which stimulate cell defences, hydrate and soften the skin, strengthening its capacity to protect itself; **Asian pennywort** and **aloe vera**, with powerful healing, anti-inflammatory and moisturizing properties; **microcollagen**, penetrates the various layers of the skin and stimulates the components that fill-in the extracellular matrix, such as collagen or hyaluronic acid.

NATURAL DEFENCE

Complete defence treatment for the skin, using substances that activate certain functions. It strengthens the skin's effectiveness in hydration, reaffirmation and anti-wrinkle effects.

Active ingredients: **Sapphire flower extract**, which regulates cell metabolism and fights against free radicals; **farnesol** and **panthenol**, with regenerating and stimulating properties, they increase the skin's resistance; **organic silicon**, in-depth hydration and thermal anti-stress effects; **erythrose**, tones and hydrates; **pentavitin**, **hyaluronic acid**, **sodium pyrrolidone carboxylate** (natural wetting agent) and **sea plankton**, extra powerful hydrating agents; **vitamins A and E** nanoencapsulated, **dipalmitol hydroxypoline**, retynl palmitate and tocopherol for fighting wrinkles; **soya**, cell activator; **apple** extract, against premature ageing.

4. PREVENTION

LIFT VITAMIN-C

Anti-free radical and cell regeneration treatment. It also has a pleasant texture and affords freshness, softness and comfort to the skin.

Active ingredients: **Nikkol VC-IP**, high absorption vitamin C, which can activate cell metabolism, increase collagen synthesis, with anti-oxidant activity, reduce the harmful effects of UV rays, provide radiance and inhibit the synthesis of new melanin, and whitening the melanin that has already been formed. This new generation of vitamin C penetrates more quickly and provides greater hydration and firmness.

SKIN OXYGEN

Oxygenating, nutritive and regenerative treatment, which facilitates epidermal cell growth and prevents the growth of free radicals.

Active ingredients: Ceramides, to maintain the natural cutaneous structure and ensure that the oxygen reaches inside the skin; **vitamin A** for regulating skin keratinization; **vitamin E** for preventing wrinkles.

Q-10 ANTI-OXIDANT

Dermal-epidermal anti-stress treatment, that repairs the damage caused by prolonged exposure to external agents and by the physiological process of ageing. It reduces irritations, promotes oxygenation and provides energy.

Active ingredients: **Coenzyme Q-10**, hydroxyacids derived from **salicylic acid**, **green tea** extract, **vitamins A, C and E**, **ceramides** and **hyaluronic acid**, to revitalise fatigued skins and to act as an anti-oxidant.

SKEYNDOR FACE MASKS

Corrective masks that are part of aromatherapy wellness.

Active ingredients: Alginates, brown seaweed extracts that are found on the rocky coasts of the North Atlantic, mainly in the United States, Great Britain, France and Norway. They are lineal macromolecules (**β-D manuronic acid** and **α-L guluronic acid**). Their balance and intensity determine the properties of the polymer and its gelification. As well as other active ingredients such as **wheat germ**, **beer yeast**, **red seaweed** or **rose petals** in the case of dry skins, **papain**, green seaweed, **willow tree** extract and **arnica** for oily skins; **fresh kiwi**, **mango**, **red grape** cells or **coralline seaweed** for lifeless skins; **callendula**, **eucalyptus**, **chamomile** and **rosemary**, **aloe vera** and **mamaku** for sensitive skins, and for under-nourished skins, **coconut pulp**, **honey** and **rose hip**.

SKEYNDOR MEN

SKEYNDOR presents the revolutionary **Abdomen reducing gel-cream**. A compound for **specifically fighting against excess abdomen volume in men**, in a quick and effective way. It is made of a selection of reducing active ingredients such as **green coffee seed** extract, **Ilex paraguariensis** leaves or the **Phyllacantha fibrosa** extract, which have been developed and tested scientifically on men. They act by reducing the harmful cholesterol receptors (LDL, VLDL) in the body's fat cells. At the same time, **they stimulate burning** accumulated fat. Their fresh, light texture is absorbed without leaving any residue or any greasy sensation on the skin.

Continuing with the skin care range for men, the **SKEYNDOR Post-Depil for Men treatment** is definitely worth a mention. It is a solution aimed at **reducing the aggression of hair removal on men's skin**. Its concentrate of **plant active ingredients** for taking care of **the skin after shaving**, is specially formulated for the characteristics of masculine skin and hair follicles.

It contains a mixture of substances with powerful healing and calming properties, which reduces the appearance of skin irritation and redness, and activates the skin's defences to prevent the pores from becoming inflamed. Also, the **keratolitic active ingredient** with high penetration capacity, destroys the keratine and weakens the hair's root, delaying its growth.

The new masculine range by **SKEYNDOR** is made up of products **for the face** such as the **anti-under eye bag gel** with fresh mango cells; **Anti-shine moisturising emulsion** with micro absorbent particles, to prevent excess fat; **Anti-age energizing serum** with the energy of Siberian Ginseng, or the **Daily detox face wash** cleansing mousse.

MESOSCIENCE BY SKEYNDOR

Virtual mesotherapy: effectiveness without injections

Based on the fundamentals of scientific cosmetics and on the latest developments in electrotherapy, **Mesosience by SKEYNDOR** implies gaining time, effectiveness and accuracy in the fight against the most common aesthetic problems: wrinkles, firmness, stretch marks and cellulite.

Mesosience by SKEYNDOR is the solution the firm offers to beauty centres so that they can perform treatments with the so-called **"virtual needle"**. This system, used in the medical field and at last adopted in the cosmetic sector, simplifies booth treatments because **it increases the cell capturing power** and facilitates the passage of substances along the water channels called "aquaporins". The discovery of these channels along which **small electrical impulses** can travel, **thereby stimulating the cells**, led to the **2003 Nobel Prize in Chemistry** being awarded to the US doctors, Peter Agree and Roderick Mackinnon. Thanks to this, today we have various virtual mesotherapy techniques that can be applied to cosmetics:

Activating current: It creates a general stimulus that makes the organism keep in balance with its own resources.

Electroporation: It uses electromagnetic currents that produce permeability in the cell membrane and in the pores that absorb the active ingredients.

Hydroelectrophoresis: It uses pulsed current to make the active substances penetrate inside the tissues.

Cryotherapy: This method consists of a system that includes applying cold to reduce microcirculation and setting the active ingredients to heighten their effect.

Two basic tools are involved in **virtual mesotherapy**: the **Mesosience by SKEYNDOR** equipment and the **professional experience when applied**.

The mesotherapy must be administered with **small amounts of active ingredients** because, as they are penetrated with electrical stimulation, they reach the intra dermal layers immediately. A small amount is enough to obtain very significant effects which, otherwise, could only be obtained with large product doses.

This treatment includes the specific range of **mesocosmetics** designed by **SKEYNDOR**, which provide a large contribution of active ingredients in a controlled manner.

BODY SCULPT

SKEYNDOR with more than 45 years of experience in the area of professional cosmetics launches the new **Body Sculpt** designed specifically to treat the disorder of the body such as **cellulite** or **flaccidity**.

Sculpting body concentrate, stubborn cellulite: An ionisable professional biological concentrate for treating resistant cellulite. Indicated for hard cellulite, contains a fibrolithic agent that improves the lumpy appearance of orange peel skin. Contains caffeine and caffeine derivatives. Not recommended for pregnant women, breastfeeding mothers and people who are sensitive to caffeine.

Draining sculpting concentrate: An ionisable professional biological concentrate formulated to improve the appearance of skins with fluid retention. Indicated for soft cellulite and to soften the contour volume. Contains caffeine and caffeine derivatives. Not recommended for pregnant women, breastfeeding mothers and people who are sensitive to caffeine.

Firming-stretch marks concentrate: An ionisable professional biological concentrate formulated to improve the appearance of skin with stretch marks and/or evident signs of sagging. Lifting effect. Helps attenuate the process that causes stretch marks and sagging caused by age, pregnancy or slimming diets.

Sculpting massage cream: A body massage cream formulated to treat aesthetic problems related with cellulite and fluid retention. An emulsion that contains raspberry extract enriched with 5% pro-vit E.

Firming-stretch marks massage cream: A body massage cream formulated to treat aesthetic problems associated with stretch marks and sagging skin. Multivitamin formula with mango butter.

Intensive sculpting silhouette: A reducing shock treatment for obtaining rapid remodelling results. Intensive formula prepared with tested anti-cellulite and draining agents.

Genesculpt cellulite cream: An anti-cellulite cream formulated with *Oenanthe javanica* extract in Isorhamnetin (IsR), a new molecule that suppresses human adipose stem cells (hAMSCs, in-vitro). Act at the source of the cellulite, to obtain a longer-lasting reducing effect.

Abdomen sculpting emulsion: An emulsion specially formulated to soften the swollen appearance of the abdomen and slim the waist. Reducing formula with cupuacu butter.

Bust sculpting emulsion: A special emulsion for gradually and naturally adding volume to and toning the skin of the bust. With a lifting-tensor effect. Formulated with shea butter and without phytohormones.

Firming-stretch marks emulsion: An emulsion specially formulated to prevent and soften the appearance of stretch marks and attenuate signs of sagging skin. Multivitamin formula enriched with cupuacu butter.

Velvet hydrating body emulsion, normal skins: An essential body emulsion for protecting and conditioning the skin, maintaining optimum skin hydration. Formulated with xylitol and xylitol derivatives, a new generation of moisturisers that structure and harmonise the skin's natural hydrodynamics. Enriched with cupuacu butter.

Caresse moisturizing body cream, dry skins: A body cream rich in moisturizing agents which protects and cares for dry, unprotected skins. Formulated with xylitol and natural extracts with a sustained effect that moisturise the skin, consolidating its barrier function and recovering its natural hydrodynamics.

BODY SLINDY

Remodelling and reaffirming anti-cellulite treatment that blends oriental and occidental techniques. It is made up of active ingredients that provide a state-of-the-art biochemical synthesis.

Active ingredients: Body Slindy Complex (protamine, phyllacantha, caffeine, carnitine, decapeptide) with fat-burning molecules, to reduce the fatty acid capturing process. It activates the removal of triglycerides and prevents adipogenesis; **phyllacantha**, an extract of marine origin without any oestrogenat prevents the formation of intra-abdominal fat; **gelidium**, red seaweed that activates the drainage of retained liquids and reduces the orange skin effect; **Chinese cinnamon**, with powerful vasomotor action, that oxygenates and nourishes; **ginkgo**, natural vasoprotector that promotes the removal of liquids; **red grape**, an anti-oxidant with calming activity; **oat polysaccharides**, a solution of sugars originating from oats, which join to the skin's lipids triggering a lifting effect; phosphocreatine precursors, that improve the tone of tissues with a certain degree of atrophy and laxitude due to low physical activity; **Asian pennywort** a reaffirming and anti-inflammatory element; **mango butter** and **Chlorella vulgaris**, with anti-ageing effects.

GENESCULPT CELLULITE PACK is an innovative **reduction treatment for stubborn cellulite** that reduces adipose tissue and associated cellulite throughout the body. Genetic inheritance, sedentary lifestyles and an unbalanced calorie diet lead to the formation and accumulation of adipose tissue, which results in an anti-aesthetic accumulation of fat that has to be broken down.

GENESCULPT CELLULITE PACK incorporates the Isorhamnetine molecule which, to date, is the only one capable of inhibiting the maturity of adipose cells, by directly blocking the self-generating ability of fatty tissue by directly inhibiting the resident stem cells.

GENESCULPT CELLULITE PACK acts on the various processes that lead to fat accumulation:

It activates basal lipolysis, degrading the triglycerides.

It enhances the lipolysis induced by adrenaline, during exercise or stress situations.

It inhibits lipogenesis, the formation of triglycerides, after eating food.

It inhibits adipogenesis, differentiating mature adiposities, as an overall preventive effect.

The cosmetic use of new molecules than can enhance stem cell activity has meant, for aesthetics, a revolutionary strategy for being successful in anti-age regenerating treatments, associated with both the skin and capillary vessels.

So, the most recent aesthetics application techniques are aimed at inhibiting, instead of enhancing, the stem cell activity specifically associated with certain non-aesthetical features, like cellulite or excess body volume, which are caused by excess activity in these supercells, triggered by genetic or external causes.

Based on clinic tests published in 2009 and 2010, **SKEYNDOR** is launching onto the market its **GENESCULPT CELLULITE PACK** – a top ranking body reducing and remodelling treatment, which includes Isorhamnetine (IsR) in its formula. This is an innovative molecule endorsed by (in-vitro) clinical studies that reveal its ability to block the activity of stem cells resident in human fatty tissue, thereby reducing at source, the skin's ability to accumulate fat, and this opens up the possibility of modelling the skin's structure.

SPA SENSES

The sensations therapy

SKEYNDOR has developed a new way of experiencing wellness and harmony, through cosmetic care. The aims are to improve self-esteem, self-determination and also general moods, through sensations.

Spa Senses by **SKEYNDOR** is made up of three basic lines:

1. Gemo-Thermal: Based on the regenerative power of the water and minerals. It uses thermal salts from the source at Salies de Béarn, in France; malachite extract to overcome fatigue, sapphire to give the body energy and clay with hematite to remineralise body tissues.

2. Botanical -Spice: Nature's energy through plant essences. Micro particles of orange, apricot, grape and lichee, make up body creams for renewing and oxygenating the skin. Bamboo, lotus flower, orchids or poppies are other botanical elements used to rebalance the body.

3. Oriental Senses: Based on the ayurvedic philosophy according to which man is body, mind and spirit, its sessions are characterized by stimulating vital energy using the essence of avocado, sesame, black cumin, saffron from India, coconut, or the plant species like neem and opium poppy.

This range is completed with the **Croma Senses Oils** collection. It has been proved that the skin and the brain are closely related and share various hormones, neurotransmitters and receptors. This fact gives rise to **Neurocosmetics**. Sight, touch and smell play an essential role as they evoke experiences associated with pleasure or relaxation.

From left to right:

Butter peeling cream with spices; **Tridosha massage oil** with spices; **ylang-ylang oil**, improves hypertension and is an aphrodisiac. It is obtained from the ylang ylang flower, a tree original from India; **lemon oil**, antiseptic and diuretic; **myrrh oil**, regulates respiratory functions; **neroli oil**, from the orange flower. It is an anti-depressant and calming agent; **lavandin oil**, healing and anti-migraine properties.

BIOLOGIC SUN PROTECTION

Sun range with fat-burning active ingredients

The sun is the main external agent that causes premature skin ageing and its influence is crucial in its evolution over time. The protection against UV rays during any time of the year and under any meteorological circumstances becomes the priority aim to maintain the skin and the body's healthy, youthful appearance. Therefore, a quality sun cream is the best anti-age, moisturising and nourishing product for the skin.

SKEYNDOR, presents a new product within its **Biological Sun Protection** sun range, which also helps to remodel the body's silhouette:

Shaping Sun Body Emulsion is an emulsion with an average sun protection factor (SPF 15) which as well as guaranteeing the best protection against the harmful effects of the sun on our skin, it contains an exclusive remodelling sun complex based on the latest developments in neuro-cosmetics. Thanks to this, it can multiply the action of the reducing-reaffirming active ingredients, through the beneficial effects of the sun.

Active ingredients: rhodiola rosea (golden root), caffeine, carnitine and organic silicon.
UVA (COLIPA) protection. Water resistant. With UV-PEARLSTM.

The whole range of **Biological Sun Protection** sun products by **SKEYNDOR**, including **Shaping Sun Body Emulsion**, contains **three powerful active ingredients** that combine a new generation of biological protectors containing classic filters, to minimise the harmful energy of the sun's rays.

The first of its active ingredients is a complex made with lipids from the **laminaria ochroleuca** or "golden algae" seaweed variety, which grows on the French Brittany coast. More than twenty clinical tests endorse the potential of this species to reduce most of the side effects associated with the sun and UV radiations in a short, medium and long term. It is one of the most complete and effective biological sun protectors. This is thanks to its composition, which enables it to resist under extreme saline conditions and under strong sun radiation variations, without its cells would age or they would be destroyed.

The second active ingredient is the **thermal water from the source at Salies-de-Béarn**, in the south of France. Its balanced composition in minerals and trace elements prevents abrupt salinity changes in the skin or the excessive loss of salts through perspiration which can reduce the skin's natural capacity to protect itself against external agents.

And lastly, the **SKEYNDOR** sun range uses **UV-PEARLTM** technology, capsules which catch part of the chemical filters, reducing the risk of sensitivity of those whose skin reacts most to sun protectors.

MAKE UP TREATMENT

Colour produces sensations and feelings, and uses universal codes to transmit a range of messages; it expresses values, states of mind and situations beyond our visual perception. Make up plays with colour to create a perfect background that speaks volumes, redefining the face, highlighting its perfection.

The **Make up treatment** color range enables Professionals to obtain beauty simply, by combining their techniques and color palette, just like a real piece of artwork.

Intense and silky shadows, creamy, revolutionary lipsticks, daring and surprising lash mascaras, and make up bases that are adaptable and provide all over coverage...

Well-defined oval shape, blushing cheekbones, mysterious eyes, sensual lips and thick lashes the key to highlighting beautiful features.

SSUPPLEMENTS

Beauty treatments tend more and more to include a maximum number of factors that will prevent and favour an attractive appearance and wellbeing.

Skeyndor has more than 45 years' experience in conducting research in the beauty sector and is a pioneer in cosmetic treatments, and in producing treatment products for use by Professional beauticians.

Skeyndor Ssupplements represents yet another step forward in research and development into solutions for improving non-aesthetic effects and contributing to obtaining efficient treatments. It is an easy to use formula that makes it possible to supplement and enhance beauty protocols and treatments from inside the body.

Skeyndor Ssupplements is a nutricosmetics line created by expert nutritionists, in conjunction with Professional Beauticians, for the purpose of enhancing the results of traditional beauty treatments.

The basic formulation of the entire **Skeyndor Ssupplements** range includes a multi mineral and vitamin complex that guarantees the daily nutritional intake of minerals and vitamins related to beauty and skin care.
